## Out URL

Posted by japamor - 2008/09/09 17:44

---

Hi

I'm having difficulty setting up the Out code. I'm using Smart Thumbs and I've put as my thumb trade script URL:  
<http://www.nylonfreeporn.com/ftt/o.php?url=#url#>

Whenever I click a link on my site I get directed to Google.

Any help would be appreciated.

Many thanks.

japamor

Thanks Sersh

I can't find your ICQ number under your profile. I did an ICQ search but there are many members named Sersh!  
Mine is 260 293 399.

Cheers  
japamor

Hi Sersh,  
Sorry to keep troubling you but I'm still having trouble working out my Out link.  
Basically i just want to create a general Out link 35% to galleries and 65% to trade. I've already put 65% skim in my general setting.  
In Smart Thumbs I'm currently using  
<http://www.nylonfreeporn.com/ftt/o.php?url=#url#>  
Each time I click a link I get my default error page.  
Any help would be much appreciated.

---

You can set default skim scheme for traders, noref and notrade to 35 on settings->skim settings

---

---

Thanks for that Sersh.

Any idea why none of my links are going to galleries? Every click on a thumb goes to my default error file. Nothing goes to a gallery.

At the moment my Out link in Smart Thumbs is <http://www.nylonfreeporn.com/ftt/o.php?url=#url#>

I don't think this can be right but I'm hopeless with PHP and I don't know what's wrong with it.

Do you have any trades in database?  
This happens if no trades was added.

---

## Re:Out URL

---

Yes, I've added a couple of my own sites. Every click still goes to Google.

---

---

Try manual cron script run from maintaine menu. If problem goes away - check your cron jobs - it does not run ftt cron.php script

---

## Re:Out URL

---

Yes, as soon as I do a manual cron I can access the galleries for a few seconds, so it must be the cron. I put

```
* * * * * cd/usr/local/apache/sites/client926/nylonfreeporn.com/htdocs/ftt/secure/; cron.php >/dev/null;
```

I can't check if this is right or not as the original path is given on the post-installation page which I no longer have. Do I have to delete my installation and start again from scratch?

Thanks for all your help.

Its OK I found it. I somehow missed the 2 minute cron.  
Many thanks for your help Sersh.

in your `"* * * * * cd/usr/local/apache/sites/client926/nylonfreeporn.com/htdocs/ftt/secure/; cron.php >/dev/null;"` main errors is no space between `cd` and `/usr/local/` and `php` was not called

Right line:

`*/* * * * * cd /usr/local/apache/sites/client926/nylonfreeporn.com/htdocs/ftt/secure/; /usr/bin/php cron.php >/dev/null;`  
`/usr/bin/php` may be need to be replaced with `/usr/local/bin/php`. Depends on your system.

Type in shell:

`whereis php`

to find exact location of `php` executable.
